EYE PROTECTION CATALOG

ANSI EYEWEAR STANDARD

Z87.1-2020 Z87+ Every MCR Safety eye protection meets or exceeds ANSI Z87+ high impact standard

Impact testing requirements

HIGH VELOCITY IMPACT

.25 inch steel ball fired at the center of the lens at 150 fps or 102 mph.
Pass or Fail Result

HIGH MASS IMPACT

1.1 lb steel projectile with a conical tip dropped at the center of the lens from a vertical distance of 50 inches.
Pass or Fail Result

U.S. MILITARY
STANDARD

MIL-PRF-31013

MIL-PRF 32432 BALLISTIC

MILITARY IMPACT

0.15 caliber, 5.8 grain projectile fired at the center of the lens at a velocity of 640-660 fps

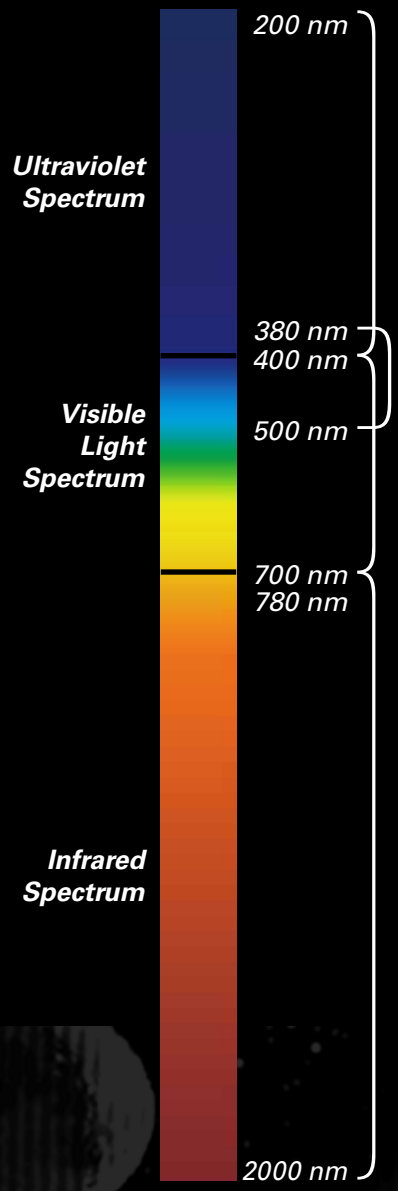

ULTRAVIOLET PROTECTION

All MCR Safety manufactured lenses block 99.9% UV light ranging from 200-385 nanometers. UV420 products block 99.9% of light rays up to 410 nanometers. 99.9% UV performance rating is denoted by the U6 marking on every lens.

SUGGESTED LENS TINT

All MCR Safety Lens Block 99.9% UVA-B-C Up To 385 nm UV420 products block 99.9% of light rays up to 410nm

VISIBLE LIGHT TRANSMITTANCE (VLT)

WHAT IS VLT?

Visual Light Transmission (VLT) is a measurement that determines how much visible light passes through a lens to your eye. The greater the number of VLT %, the more light, and the smaller the number, the lesser amount of visible light.

Lens	VLT%	Marking	UV Light	*Blue Light*	*Visible Light*	*IR*
Clear	90	-	100	14	14	22
Clear Blue Light Filter	88	S	100	41	25	
Amber	80	S	100	94	51	22
Light Blue	68	S	100	15	23	21
I/O Clear Mirror	36	L2	100	66	68	46
Filter 2.0	30	W2.0	100	99	78	95
G14-Gray Green	14	L3	100	90	87	17
Gray	13	L3	100	89	88	22
Brown (Espresso)	13	L3	100	96	92	17
Black Mirror	13	L3	100	87	86	33

Filter 5.0	2	W5	100	99	98	98

UV-AF® COATING:

MCR Safety is the first company to offer safety glasses that have been UV cured, improving both anti-fog performance and durability. The anti-fog technology, shortened to UV-AF, describes the very essence of the coating itself, making it easier for users to remember and to more easily identify UV cured safety glasses. This technology is now available in our Checklite®® and Bearkat® styles.

MAX6® COATING:

- Superior Anti-Fog Coating provides 6X greater Anti-Fog Performance when compared to standard Anti-Fog styles.
- In Extreme Fogging Conditions, MAX6® remains clear or fogs for no more than 10 seconds, while current industry AF offerings take 60 seconds or longer to dissipate.
- Passes ANSI Z87.1 anti-fog test.
- Passes EN166 N mark test for Anti-Fog.60 Seconds or Longer To Dissipate.

MAX36™ COATING:

- All of the features of MAX6® Coating above, with a second coating included.
- Superior Anti-Scratch Coating provides 3X greater scratch resistance when compared to standard Anti-Scratch styles.

ANTI-FOG THAT PERFORMS FOR YOU

In a 2013 eyewear survey MCR Safety conducted with end-users, 60% of all participants surveyed listed anti-fogging as the #1 most important buying decision when selecting safety glasses. While fog is not going to hurt your eyes, it will hurt your visibility and project a distorted view, which can cause serious accidents and injuries.

Many times, fogging is what causes workers to take off their glasses or permanently stop wearing their safety glasses altogether. Both scenarios put the worker at risk, as the impact from flying projectiles or chemical splashes can damage the eyes within seconds. All of this also adds up to a company being potentially exposed to increased medical claims, lost productivity, and lost profits. For both the company and the worker, wearing the correct safety glasses just makes good sense.

MAGNIFIERS

Have you ever heard of someone by the name of Benjamin Franklin? He is known for inventions like the lightening rod, the Declaration of Independence and a handful of wise sayings. For safety professionals though, his bifocal invention is his most noteworthy accomplishment and lives on with us today in the form of magnified protective eyewear. MCR Safety's magnifiers are made with impact protection, designed to stop a steel ball going 150 feet per second! In addition, they enhance workers overall vision and allow one to see the fine print!

Polarized

POLARIZED

Reflected light affects countless workers by causing glare and reducing visibility. This ultimately has the potential of hiding hazards and dangers, creating an environment where workers are unable to recognize unsafe workplace conditions. Polarized styles assist workers with glare, often during bright conditions, wet conditions and snowy conditions. Our polarized lens ensure workers stay safe, perform their best at work and avoid those dreaded headaches!
